

# Gently Used Gearmaking Machines... We've Taken Care of Them For You!

Forest City Gear's business model has always focused on keeping the very latest in gearmaking and finishing machine technology in house. We believe this strategy has contributed greatly to our success and our reputation in the market.

As a result of this thinking, we have many machines and other pieces of equipment for sale. Every machine is in excellent working condition and has been maintained by our service techs, since the day it came into our shop.

Our hobbing and shaping machines can all produce gears to AGMA 11 level quality or better.

These gently used machines are being offered directly from our shop to yours. We've taken good care of them and you'll benefit from that, for years to come.

We'll even let you "test drive" a machine with one of your jobs, if you're interested.

Please contact Fred Young or Gene Fann today for all the details. For a complete look at what's currently available, go to [www.forestcitygear.com/sale.asp](http://www.forestcitygear.com/sale.asp).
